**EFFICIENT ANIMAL FEED
PELLETING**

SHANGHAI PELLET MILL TYPE SVP

ANDRITZ

ENGINEERED SUCCESS

Efficient pelleting for high quality animal feed

Pelleting is the key process in animal feed production; killing pathogenic bacteria, increasing feed conversion ratios, agglomerating vitamins and nutrients and increasing bulk density for prevention of segregation and ease of handling.

SVP AND SVPC SERIES

SVP and SVPC series pellet mills contain a double-motor, triangle belt, drive system. This fine-tuned design ensures an even distribution of energy, providing reliable operation with highly efficient pelleting, and the simple structure means a machine that is also easy to operate and maintain.

The pellet mill's main shaft is cast out of structural steel alloy to ensure excellent strength and rigidity. The pellet mill base is in-block cast iron, and the feeder, conditioner trough, and pellet chamber are all made of stainless steel for hygienic conditions.

Maintenance operations on the SVP and SVPC are safer, faster, and more flexible thanks to the separate system for adjusting rollers, dies that are assembled by either screw or clamp, and safety features such as a pneumatic quick-dump bypass, overload device and die hoist.

GLOBAL SUPPLIER – LOCAL PRESENCE

With sales, service, engineering, manufacturing and production sites located all around the world, ANDRITZ Feed and Biofuel is truly a global organization with a local presence. ANDRITZ is vital to ensuring a reliable global supply of aqua feed, animal feed, pet food, and biofuel. With full process lines accounting for half the world's production of aqua feed and biomass alone, we continuously support leading producers in achieving the highest levels in safety, quality, and control from feedstock to final product.

How can we help grow your business?
